Background

KAT2A (Lysine Acetyltransferase 2A) is a Protein Coding gene. Diseases associated with KAT2A include Spinocerebellar Ataxia 7 and Chromosome 16P13.3 Deletion Syndrome, Proximal. Among its related pathways are Chromatin organization and E2F transcription factor network. Gene Ontology (GO) annotations related to this gene include chromatin binding and transcription coactivator activity. An important paralog of this gene is KAT2B.
