Background

This gene belongs to the homeobox family, members of which encode a highly conserved family of transcription factors that play an important role in morphogenesis in all multicellular organisms.Mammals possess four similar homeobox gene clusters, HOXA, HOXB, HOXC and HOXD, which are located on different chromosomes and consist of 9 to 11 genes arranged in tandem.This gene, HOXC6, is one of several HOXC genes located in a cluster on chromosome 12.Three genes, HOXC5, HOXC4 and HOXC6, share a 5' non-coding exon.
