Background

MEM α was developed based on MEM medium. Compared with MEM medium, NEAA, sodium pyruvate, zinc sulfate, VB12, biotin and ascorbic acid were added. It is widely used in suspension and adherent cell culture of various mammals. MEM α medium without nucleoside and deoxynucleoside is often used as medium for DG44 and other DHFR-cells.

This product contains many kinds of amino acids, vitamins, inorganic salts, and other ingredients for cell culture, but does not contain protein, lipids or any growth factors. Therefore, the product should be used with serum or serum-free additives.
