IFN-alpha 1 Monoclonal Antibody(Detector)

catalog number: AN002650P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

\mathbf{T}				
- 1	O.C.	cri	$\mathbf{m}\mathbf{n}$	Λn
\mathbf{L}	CO	CII	DUL	υш

Reactivity Mouse

Immunogen Recombinant Mouse IFN-alpha 1 protein expressed by Mammalian

Host Rat
Isotype Rat IgM
Clone 9B3

Purification Protein A/G Purification

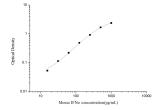

Conjugation Unconjugated

Buffer Phosphate buffered solution, pH 7.2, containing 0.05% proclin 300.

Applications Recommended Dilution

ELISA Detector $0.1-0.4 \mu g/mL$

Data

Sandwich ELISA-Recombinant Mouse IFN-alpha 1 protein standard curve. Background subtracted standard curve using IFN-alpha 1 antibody(AN002640P)(Capture), IFN-alpha 1 antibody(AN002650P)(Detector) in sandwich ELISA. The reference range value for Recombinant Mouse IFN-alpha 1 protein is 62.5-4000 ng/mL.

protein is 02.3-4000 lig/iii

Preparation & Storage

Storage Storage Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /

The interferons (IFN) are a family of cytokines with potent antiviral, antiproliferative and immunomodulatory properties, and classified based on their binding specificity to cell surface receptors. The type I IFN bind to the interferon alpha receptor (IFNAR), which consists of two subunits: IFNAR1 (alpha -subunit) and IFNAR2 (beta -subunit). This binding contributes to TNF-alpha induced signaling. Both the human and mouse genome code for more than a dozen closely related IFNa subtypes and the varous IFN a share about 80% sequence homology among them. Interferon-alpha 1 (IFNA1) is a secreted, approximately 19 kDa member of the type I interferon family of molecules. Mature mouse IFN-alpha 1 shares 63% and 82% amino acid sequence identity with human and rat IFN-alpha 1, respectively. Low level IFN-alpha is detected under physiological conditions, and the production of IFNs is markedly enhanced during virus infection. Although originally discovered by its capability to fight virus replication, IFN-alpha functions as a prototypic tumor suppressor that represses the clinical tumorigenic phenotype in some malignancies.
