Recombinant Human SDHL/SDS Protein (His Tag)

Catalog Number: PDEH100986

Note: *Centrifuge before opening to ensure complete recovery of vial contents.*

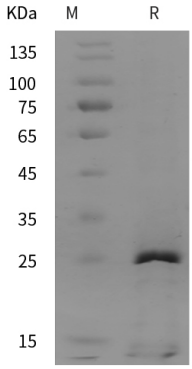

Description

Species	Human
Source	E.coli-derived Human SDHL protein Met1-Thr217, with an N-terminal His & C-terminal His
Calculated MW	23.8 kDa
Observed MW	25 kDa
Accession	P20132
Bio-activity	Not validated for activity

Properties

Purity	> 95% as determined by reducing SDS-PAGE.
Endotoxin	< 10 EU/mg of the protein as determined by the LAL method
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from a 0.2 μm filtered solution in PBS with 5% Trehalose and 5% Mannitol.
Reconstitution	It is recommended that sterile water be added to the vial to prepare a stock solution of 0.5 mg/mL. Concentration is measured by UV-Vis.

Data

SDS-PAGE analysis of Human SDHL/SDS proteins, 2 μg/lane of Recombinant Human SDHL/SDS proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 25 kDa.

Background

This gene encodes one of three enzymes that are involved in metabolizing serine and glycine. L-serine dehydratase converts L-serine to pyruvate and ammonia and requires pyridoxal phosphate as a cofactor. The encoded protein can also metabolize threonine to NH4+ and 2-ketobutyrate. The encoded protein is found predominantly in the liver.
