

A Reliable Research Partner in Life Science and Medicine

Recombinant Phospho-AKT1 (Thr450) Monoclonal Antibody

catalog number: AN300087L

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Reactivity Human

Immunogen A synthetic phosphopeptide corresponding to residues around (Thr450) of the

Human Phospho-AKT1

 Host
 Rabbit

 Isotype
 IgG

 Clone
 A1201

 Purification
 Protein A

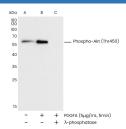

Buffer 10 mM sodium HEPES, 150 mM NaCl, 100 µg/mL protein protectant, 50% glycerol,

pH 7.5

Applications Recommended Dilution

WB 1:500-1:2000

Data

Western blot analysis of extracts from serum-starved NIH 3T3, untreated (line A); treated with PDGFA (5 μ g/mL, 5 min;

+) (line B); treated with PDGFA and λ-phosphatase (line C) using Phospho-AKT (Thr450) Monoclonal Antibody at 1:1000 dilution.

Observed-MW:55 kDa Calculated-MW:55 kDa

Preparation & Storage

Storage This antibody can be stored at 2°C-8°C for one month without detectable loss of

activity. Antibody products are stable for twelve months from date of receipt when stored at -20°C to -80°C. Preservative-Free. Avoid repeated freeze-thaw cycles.

Shipping Ice bag

Background

The serine-threonine protein kinase encoded by the AKT1 gene is catalytically inactive in serum-starved primary and immortalized fibroblasts. AKT1 and the related AKT2 are activated by platelet-derived growth factor. The activation is rapid and specific, and it is abrogated by mutations in the pleckstrin homology domain of AKT1. It was shown that the activation occurs through phosphatidylinositol 3-kinase. In the developing nervous system AKT is a critical mediator of growth factor-induced neuronal survival. Survival factors can suppress apoptosis in a transcription-independent manner by activating the serine/threonine kinase AKT1, which then phosphorylates and inactivates components of the apoptotic machinery. Mutations in this gene have been associated with the Proteus syndrome. Multiple alternatively spliced transcript variants have been found for this gene.
