**背景介绍**

Interleukin-8 (IL-8) belongs to the neutrophil-specific CXC family of Chemokines. It is one of the initial Cytokines released from a variety of cell types, including T cells, endothelial cells and fibroblasts, in response to an inflammatory stimulus and acts by recruiting neutrophils, T-cells and basophils to the site of inflammation. Elevated Interleukin-8 levels are associated with the onset of a variety of disease states.
