0.5 mg/mL. Concentration is measured by UV-Vis.

## Data

SDS-PAGE analysis of Human GM-CSF proteins, 2  $\mu$ g/lane of Recombinant Human GM-CSF proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 38.9 KD

## Background

The protein encoded by this gene is a cytokine that controls the production, differentiation, and function of granulocytes and macrophages. The active form of the protein is found extracellularly as a homodimer. This gene has been localized to a cluster of related genes at chromosome region 5q31, which is known to be associated with interstitial deletions in the 5q-syndrome and acute myelogenous leukemia. Other genes in the cluster include those encoding interleukins 4, 5, and 13.
