# Purified Anti-Human CD25 Antibody[BC96]

catalog number: E-AB-F11940P

Note: Centrifuge before opening to ensure complete recovery of vial contents.

## Description

**Reactivity** Human

Immunogen Recombinant Human CD25 protein

**Host** Mouse

**Isotype** Mouse IgGl, κ

Clone BC96

**Purification** >98%, Protein A/G purified

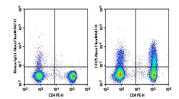

**Conjugation** Unconjugated

buffer PBS, pH 7.2. Contains 0.05% proclin 300.

## **Applications** Recommended Dilution

FCM  $2 \mu g/mL(1\times10^5-5\times10^5 \text{ cells})$ 

#### Data

Human peripheral blood lymphocytes were stained with 0.2μg Purified Anti-Human CD25 Antibody[BC96] (Right) and 0.2μg mouse IgG1,κ lsotype Control (Left), followed by AF647-conjugated goat Anti-mouse IgG Secondary Antibody, then anti-human CD4 PE-conjugated Monoclonal Antibody.

## **Preparation & Storage**

Storage Storage Store at 4°C valid for 12 months or -20°C valid for long term storage, avoid freeze /

thaw cycles.

Shipping Ice bag

## Background

The interleukin 2 (II.2) receptor alpha (II.2RA) and beta (II.2RB) chains, together with the common gamma chain (II.2RG), constitute the high-affinity II.2 receptor. Homodimeric alpha chains (II.2RA) result in low-affinity receptor, while homodimeric beta (II.2RB) chains produce a medium-affinity receptor. Normally an integral-membrane protein, soluble II.2RA has been isolated and determined to result from extracellular proteolyisis. Alternately-spliced II.2RA mRNAs have been isolated, but the significance of each is presently unknown. Mutations in this gene are associated with interleukin 2 receptor alpha deficiency.
