# Elab Fluor® 647 Anti-Human CD161 Antibody[HP-3G10]

Catalog Number: E-AB-F1155M

Note: Centrifuge before opening to ensure complete recovery of vial contents.

### **Description**

Reactivity Human Host Mouse

**Isotype** Mouse IgG1, κ **Clone No.** HP-3G10

Isotype Control Elab Fluor® 647 Mouse IgG1, κ Isotype Control[MOPC-21] [Product E-AB-F09792M]

Conjugation Elab Fluor® 647

**Conjugation Information** Elab Fluor<sup>®</sup> 647 is designed to be excited by the Red laser (627-640 nm) and detected

using an optical filter centered near 670 nm (e.g., a 660/20 nm bandpass filter).

Storage Buffer Phosphate buffered solution, pH 7.2, containing 0.09% stabilizer and 1% protein

protectant.

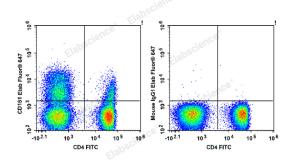

#### **Applications**

#### Recommended usage

**FCM** 

Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5  $\mu$ L of antibody per test (million cells in 100  $\mu$ L staining volume or per 100  $\mu$ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.

## Data

Human peripheral blood lymphocytes are stained with Elab

Fluor<sup>®</sup> 647 Anti-Human CD161 Antibody and FITC Anti-Human CD4 Antibody (Left). Lymphocytes stained with FITC

Anti-Human CD4 Antibody and Elab Fluor<sup>®</sup> 647 Mouse IgG1, κ Isotype Control (Right) are used as control.

## **Preparation & Storage**

**Storage** Keep as concentrated solution.

This product can be stored at 2-8°C for 12 months. Please protected from prolonged

exposure to light and do not freeze.

Shipping Ice bag

## **Antigen Information**

Alternate Names NKRP1A;CLEC5B;HNKR-P1a;KLRB1;NKR-P1A

Uniprot ID Q12918

Gene ID Background 3820

CD161 is a type II transmembrane glycoprotein, also known as NKR-P1A, that is expressed as a 40-44 kD homodimer. It is a member of the C-type lectin superfamily. CD161 is expressed on a majority of NK cells, NKT cells, and subsets of peripheral T cells and CD3+ thymocytes. It has been reported that Th17 cells are a subpopulation of CD4+CD161+CCR6+ cells. While the biological function of CD161 is not clear, it has been suggested to serve either as a stimulatory receptor or to inhibit NK cell-mediated cytotoxicity and cytokine production. LLT-1 (lectin-like transcript-1, also named as osteoclast inhibitory lectin or CLEC2D) is the ligand of CD161.
