### Data

SDS-PAGE analysis of Mouse PDGF-BB proteins, 2µg/lane of Recombinant Mouse PDGF-BB proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 33 KD

### Background

Platelet-derived growth factor-B (PDGFB) is necessary for normal cardiovascular development. The administration of PDGFB alone normalized tumor vasculature by increasing periendothelial coverage and vascular functionality. Interestingly, this effect exerted by PDGFB was also observed in the presence of DAPT. So PDGFB is able to improve tumor vascularity and allows the anticancer action of DAPT in the tumor.
