

The professional cell culture empowers a healthier world

## 1 M HEPES Solution

Cat. No.: PB180325

Size: 100mL

## **General Information**

**Product Form** Liquid Concentration 1 M pН 7.2 - 7.4

**HEPES** 238.3 g/L

Dissolvent Purified water

Storage 2-8°C, Shading Light **Shipping** Room Temperature

**Expiration date** 24 months

## **Background**

procellsystem HEPES is all known as N-2-hydroxyethylpiperazine-N-2-ethane sulfonic acid, is a commonly usedbiological buffer. pKa (25°C) is 7.5 and an effective buffer range of pH is 6.8-8.2. The greatest advantage of HEPES is that to maintain the pH range of a solution for a longer period of time in an open environment.

HEPES cannot pass through biofilms. It is a chemical and enzymatic stable substance withlimited effect on biochemical reactions, and the absorption of visible and ultraviolet light is extremelylow. Therefore, it is generally considered that HEPES is an excellent biological buffer, and there is notoxic effect to the cells. The working concentration is 10-50 mM and the final concentration for cell culture is 10 mM.

## **Notes**

- This product is for research use only.
- This product is sterilized by 0.1 µm filtration.
- It is necessary to pay attention to the aseptic operation and avoid the pollution. 3.
- This product is 50 × concentrated solution and dilute it to to the desired concentration before use. Procell syste
