## **Recombinant TATA Box Binding Protein Monoclonal Antibody**

catalog number: AN301051L

Note: Centrifuge before opening to ensure complete recovery of vial contents.

#### **Description**

Reactivity Human; Mouse; Rat

Immunogen Recombinant Human TATA Box Binding Protein protein

HostRabbitIsotypeIgG,κCloneB806PurificationProtein A

Buffer PBS, 50% glycerol, 0.05% Proclin 300, 0.05% protein protectant.

## Applications Recommended Dilution

IHC 1:400-1000 WB 1:1000-5000

#### Data

Western Blot with Recombinant TATA Box Binding Protein Monoclonal Antibody at dilution of 1:1000 dilution. Lane A: HEK293 cells.

Observed-MW:38 kDa Calculated-MW:38 kDa

Immunohistochemistry of paraffin-embedded mouse colon tissue using Recombinant TATA Box Binding Protein Monoclonal Antibody at dilution of 1:200.

Immunohistochemistry of paraffin-embedded human colon carcinoma tissue using Recombinant TATA Box Binding Protein Monoclonal Antibody at dilution of 1:200.

Rev. V1.1

## **Preparation & Storage**

Storage Store at -20°C Valid for 12 months. Avoid freeze / thaw cycles.

Shipping lce bag

Initiation of transcription by RNA polymerase II requires the activities of more than 70 polypeptides. The protein that coordinates these activities is transcription factor IID (TFIID), which binds to the core promoter to position the polymerase properly, serves as the scaffold for assembly of the remainder of the transcription complex, and acts as a channel for regulatory signals. TFIID is composed of the TATA-binding protein (TBP) and a group of evolutionarily conserved proteins known as TBP-associated factors or TAFs. TAFs may participate in basal transcription, serve as coactivators, function in promoter recognition or modify general transcription factors (GTFs) to facilitate complex assembly and transcription initiation. This gene encodes TBP, the TATA-binding protein. A distinctive feature of TBP is a long string of glutamines in the N-terminus.
