Recombinant Swine IL-15 protein(His Tag)

Catalog Number: PKSS000008

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Species Porcine

Source E.coli-derived Porcine IL-15 protein Thr 49-Ser 162, with an N-terminal His

Calculated MW 14.1 kDa Observed MW 11-17 kDa Accession Q95253

Bio-activity Measure by its ability to induce proliferation in TF-1 cells. The ED₅₀ for this effect is

<5.5 ng/mL.

Properties

> 95 % as determined by reducing SDS-PAGE. **Purity**

Endotoxin < 0.01 EU per µg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

This product is provided as lyophilized powder which is shipped with ice packs. Shipping

Lyophilized from sterile PBS, pH 7.4. **Formulation**

Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants

before lyophilization.

Please refer to the specific buffer information in the printed manual.

Please refer to the printed manual for detailed information. Reconstitution

Data

> 95 % as determined by reducing SDS-PAGE.

Background

Elabscience Bionovation Inc.

Human Interleukin 15 (IL-15) is a cytokine that regulates T cell and natural killer cell activation and proliferation. IL-15 binds to the alpha subunit of the IL15 receptor (IL-15RA) with high affinity. IL-15 also binds to the beta and gamma chains of the IL-2 receptor, but not the alpha subunit of the IL2 receptor. IL-15 is structurally and functionally related to IL-2. Both cytokines share some subunits of receptors, allowing them to compete for and negatively regulate each othe r's activity. The number of CD8+ memory T cells is controlled by a balance between IL-15 and IL-2. Despite their many overlapping functional properties, IL-2 and IL-15 are, in fact, quite distinct players in the immune system. IL-15 is constitutively expressed by a wide variety of cell types and tissues, including monocytes, macrophages and DCs. Mature Human IL-15 shares 70% amino acid sequence identity with Mouse and Rat IL-15.
