Recombinant Human S100A7/PSOR1 protein (His Tag)

Catalog Number: PDEH100929

Note: *Centrifuge before opening to ensure complete recovery of vial contents.*

Description

Species	Human
Mol_Mass	10.9 kDa
Accession	P31151
Bio-activity	Not validated for activity

Properties

Purity	＞95% as determined by reducing SDS-PAGE.
Endotoxin	＜10 EU/mg of the protein as determined by the LAL method
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80 ℃. Reconstituted protein solution can be stored at 4-8℃ for 2-7 days. Aliquots of reconstituted samples are stable at ＜-20℃ for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from a 0.2 μm filtered solution in PBS with 5% Trehalose and 5% Mannitol.
Reconstitution	It is recommended that sterile water be added to the vial to prepare a stock solution of 0.5 mg/mL. Concentration is measured by UV-Vis.

Data
SDS-PAGE analysis of Human S100A7/PSOR1 proteins, 2μg/lane of Recombinant Human S100A7/PSOR1 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 13 KD.

Background

S100A7 is a 11-12 kDa member of the S100 family of EF hand calcium binding proteins. Human S100A7 shares 32% amino acid sequence identity with mouse S100A7A, the closest related protein in mouse. It is acetylated at the N-terminus and binds both calcium and zinc ions. S100A7 is up-regulated in keratinocytes of psoriasis and atopic dermatitis lesions, as well as in epithelial cells of the tongue, eye, and female genital tract. Its up-regulation can be induced by bacterial exposure, inflammatory cytokines, or epidermal barrier disruption. S100A7 supports epithelial integrity through killing E. coli by sequestration of zinc and through inducing the up-regulation of tight junction proteins. The interaction of S100A7 with RAGE promotes the migration of immune cells and the infiltration of macrophages into tumor sites.
