Inflammatory Bowel Disease 10 and Inflammatory Bowel Disease. Among its related pathways are Autophagy Pathway and Senescence and Autophagy in Cancer. GO annotations related to this gene include identical protein binding. An important paralog of this gene is ATG16L2. The protein encoded by this gene is part of a large protein complex that is necessary for autophagy, the major process by which intracellular components are targeted to lysosomes for degradation. Defects in this gene are a cause of susceptibility to inflammatory bowel disease type 10 (IBD10). Several transcript variants encoding different isoforms have been found for this gene.
