### Background

TNFRSF4 (TNF Receptor Superfamily Member 4) is a Protein Coding gene. Diseases associated with TNFRSF4 include Immunodeficiency 16 and Acute Graft Versus Host Disease. Among its related pathways are TNF Superfamily - Human Ligand-Receptor Interactions and their Associated Functions and Akt Signaling. Gene Ontology (GO) annotations related to this gene include tumor necrosis factor-activated receptor activity. An important paralog of this gene is TNFRSF1B.
