Reactivity Human

Immunogen Recombinant Human HNMT protein

HostRabbitIsotypeIgGClone2D5PurificationProtein A

Buffer 0.2 μm filtered solution in PBS

Applications Recommended Dilution

WB 1:500-1:2000

IP $0.5-2 \mu L/mg$ of lysate

Preparation & Storage

Storage This antibody can be stored at 2°C-8°C for one month without detectable loss of

activity. Antibody products are stable for twelve months from date of receipt when stored at -20°C to -80°C. Preservative-Free. Avoid repeated freeze-thaw cycles.

Shipping Ice bag

Background

In mammals, histamine is metabolized by two major pathways: N(tau)-methylation via histamine N-methyltrans ferase and oxidative deamination via diamine oxidase. This gene encodes the first enzyme which is found in the cytosol and uses S-adenosyl-L-methionine as the methyl donor. In the mammalian brain, the neurotransmitter activity of histamine is controlled by N(tau)-methylation as diamine oxidase is not found in the central nervous system. A common genetic polymorphism affects the activity levels of this gene product in red blood cells. Multiple alternatively spliced transcript variants that encode different proteins have been found for this gene.
