Human IgG Antibody Pair Set

Catalog No. E-KAB-0039 Applications ELISA

Synonyms IgG

Kit components & Storage

| Title | Specifications | Storage |
|---------------------------------------|-----------------|------------------------------|
| Human IgG Capture Antibody | 1 vial, 100 μ g | Store at -20°C for one year. |
| | | Avoid freeze / thaw cycles. |
| Human IgG Detection Antibody (Biotin) | 1 vial, 50 μL | Store at -20°C for one year. |
| | | Avoid freeze / thaw cycles. |

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Product Information

| Items | | Characteristic (E-KAB-0039) | | |
|-----------------|---------------|---------------------------------|--------------------------------------|--|
| | | Human IgG Capture Antibody | Human IgG Detection Antibody | |
| | | | (Biotin) | |
| Immunogen | Immunogen | Native Protein | Native Protein | |
| Information | Swissprot | P01860(IGHG3) | | |
| Product details | Reactivity | Human | Human | |
| | Host | Rabbit | Mouse | |
| | Conjugation | Unconjugated | Biotin | |
| | Concentration | 0.5mg/mL | / | |
| | Buffer | PBS with 0.04% Proclin 300, 50% | PBS with 0.04% Proclin 300, 1% | |
| | | glycerol, pH 7.4 | protective protein, 50% glycerol, pH | |
| | | | 7.4 | |
| | Purify | Antigen Affinity | Protein A | |
| | Specificity | Detects Human IgG in ELISAs. | | |

Applications

Human IgG Sandwich ELISA Assay:

| | Recommended | Reagent | Images |
|--------------------|------------------------|---------------------------------------|--|
| | Concentration/Dilution | | |
| ELISA | 0.5-4µg/mL | Human IgG Capture Antibody | |
| Capture | | | Alsa Alsa Alsa Alsa Alsa Alsa Alsa Alsa |
| ELISA Detection | 1:1000-1:10000 | Human IgG Detection Antibody (Biotin) | Optical Density |
| | | | 0.01 1 10 100 1000 Human lgG concentration(ng/mL) |

Note: This standard curve is only for demonstration purposes. A standard curve should be generated for each assay!

Background

Constant region of immunoglobulin heavy chains. Immunoglobulins, also known as antibodies, are membrane-bound or secreted glycoproteins produced by B lymphocytes. In the recognition phase of humoral immunity, the membrane-bound immunoglobulins serve as receptors which, upon binding of a specific antigen, trigger the clonal expansion and differentiation of B lymphocytes into immunoglobulins-secreting plasma cells. Secreted immunoglobulins mediate the effector phase of humoral immunity, which results in the elimination of bound antigens. The antigen binding site is formed by the variable domain of one heavy chain, together with that of its associated light chain. Thus, each immunoglobulin has two antigen binding sites with remarkable affinity for a particular antigen. The variable domains are assembled by a process called V-(D)-J rearrangement and can then be subjected to somatic hypermutations which, after exposure to antigen and selection, allow affinity maturation for a particular antigen.
