## **Elabscience**®

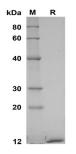

### Recombinant Human S100A7/PSOR1 protein (His Tag)

#### Catalog Number: PDEH100929

Note: Centrifuge before opening to ensure complete recovery of vial contents.

| Description    |                                                                                                                                                  |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Species        | Human                                                                                                                                            |
| Source         | E.coli-derived Human S100A7 protein Ser2-Gln101, with an N-terminal His                                                                          |
| Calculated MW  | 10.9 kDa                                                                                                                                         |
| Observed MW    | 13 kDa                                                                                                                                           |
| Accession      | P31151                                                                                                                                           |
| Bio-activity   | Not validated for activity                                                                                                                       |
| Properties     |                                                                                                                                                  |
| Purity         | >95% as determined by reducing SDS-PAGE.                                                                                                         |
| Endotoxin      | < 10 EU/mg of the protein as determined by the LAL method                                                                                        |
| Storage        | Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80                                                         |
|                | °C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at $< -20$ °C for 3 months. |
| Shipping       | This product is provided as lyophilized powder which is shipped with ice packs.                                                                  |
| Formulation    | Lyophilized from a 0.2 $\mu$ m filtered solution in PBS with 5% Trehalose and 5%                                                                 |
|                | Mannitol.                                                                                                                                        |
| Reconstitution | It is recommended that sterile water be added to the vial to prepare a stock solution of                                                         |
|                | 0.5 mg/mL. Concentration is measured by UV-Vis.                                                                                                  |

Data

SDS-PAGE analysis of Human S100A7/PSOR1 proteins, 2µg/lane of Recombinant Human S100A7/PSOR1 proteins was resolved with SDS-PAGE under reducing conditions, showing bands at 13 KD.

#### Background

# **Elabscience**®

S100A7 is a 11-12 kDa member of the S100 family of EF hand calcium binding proteins. Human S100A7 shares 32% amino acid sequence identity with mouse S100A7A, the closest related protein in mouse. It is acetylated at the N-terminus and binds both calcium and zinc ions. S100A7 is up-regulated in keratinocytes of psoriasis and atopic dermatitis lesions, as well as in epithelial cells of the tongue, eye, and female genital tract. Its up-regulation can be induced by bacterial exposure, inflammatory cytokines, or epidermal barrier disruption. S100A7 supports epithelial integrity through killing E. coli by sequestration of zinc and through inducing the up-regulation of tight junction proteins. The interaction of S100A7 with RAGE promotes the migration of immune cells and the infiltration of macrophages into tumor sites.
