## Recombinant Human JAM-A/F11R Protein (Fc Tag)

## Catalog Number: PKSH031772

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description	
Species	Human
Source	HEK293 Cells-derived Human JAM-A/F11R protein Met 1-Ala 242, with an C-terminal
	hFc
Calculated MW	50.0 kDa
Observed MW	61 kDa
Accession	NP_058642.1
Bio-activity	Measured by the ability of the immobilized protein to support the adhesion of Jurkat
	human acute T cell leukemia cells. When 8 x $10^4$ cells/well are added to JAM-A-Fc coated plates (2. 5µg/mL, 100 µL/well)in the presence of 20 ng/mL PMA,
	approximately 30-40% will adhere after 30 minutes at 37°C.
Properties	
Purity	> 95 % as determined by reducing SDS-PAGE.
Endotoxin	< 1.0 EU per µg of the protein as determined by the LAL method.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80
	°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of
	reconstituted samples are stable at $< -20^{\circ}C$ for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile 100mM Glycine, 10mM NaCl, 50mM Tris, pH 7.5
	Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants
	before lyophilization.
	Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

> 95 % as determined by reducing SDS-PAGE.

## Background

Data

## **Elabscience**®

Junctional adhesion molecule-A (JAM-A); also known as F11 receptor (F11R) or Cluster of Differentiation 321 (CD321); is a transmembrane protein expressed at tight junctions of epithelial and endothelial cells; as well as on circulating leukocytes. JAM-A protein serves as a serotype-independent receptor for mammalian orthoreoviruses (reoviruses). It is also a ligand for the integrin LFA1; involves in leukocyte transmigration. As a cell adhesion molecule of the immunoglobulin superfamily; JAM-A protein involves in platelet adhesion; secretion and aggregation; and plays a crucial role in inflammatory thrombosis and atherosclerosis. In addition; it may be a potential therapeutic target for breast cancer.
