Background

For Research Use Only

VTI1B (Vesicle Transport Through Interaction With T-SNAREs 1B) is a Protein Coding gene. Diseases associated with VTI1B include Hypomyelinating Leukodystrophy. Among its related pathways are wtCFTR and deltaF508 traffic / Late endosome and Lysosome (normal and CF) and Response to elevated platelet cytosolic Ca²⁺. Gene Ontology (GO) annotations related to this gene include SNARE binding and chloride channel inhibitor activity. An important paralog of this gene is VTI1A.
