Background

SLC17A6 (Solute Carrier Family 17 Member 6) is a Protein Coding gene. Diseases associated with SLC17A6 include Gnathodiaphyseal Dysplasia and Tendinosis. Among its related pathways are Circadian entrainment and GABAergic synapse. Gene Ontology (GO) annotations related to this gene include symporter activity and L-glutamate transmembrane transporter activity. An important paralog of this gene is SLC17A7.
