A Reliable Research Partner in Life Science and Medicine

# Recombinant Mouse VEGF165 protein(His Tag)

Catalog Number: PKSM041518

Note: Centrifuge before opening to ensure complete recovery of vial contents.

### Description

Species Mouse

Source E.coli-derived Mouse VEGF165 protein Ala 205-Arg 368, with an C-terminal His

Calculated MW 20.2 kDa
Observed MW 18 kDa
Accession NP\_033531.3

**Bio-activity** Measure by its ability to induce proliferation in HUVEC cells. The  $ED_{50}$  for this effect

is <3 ng/mL.

#### **Properties**

**Purity** > 98 % as determined by reducing SDS-PAGE.

Endotoxin < 0.1 EU per µg of the protein as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from sterile PBS,pH 8.0.

Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants

before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

#### Data

> 98 % as determined by reducing SDS-PAGE.

#### **Background**

Vascular endothelial growth factor (VEGF); also known as vascular permeability factor (VPF) and VEGF-A; is a potent mediator of both angiogenesis and vasculogenesis in the fetus and adult. It is a member of the platelet-derived growth factor (PDGF)/vascular endothelial growth factor (VEGF) family and often exists as a disulfide-linked homodimer. VEGF-A protein is a glycosylated mitogen that specifically acts on endothelial cells and has various effects; including mediating increased vascular permeability; inducing angiogenesis; vasculogenesis and endothelial cell growth; promoting cell migration; inhibiting apoptosis and tumor growth. VEGF-A protein is also a vasodilator that increases microvascular permeability; thus it was originally referred to as vascular permeability factor.
