

Recombinant Human BLBP/FABP7 Protein

Catalog Number:PKSH030813

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

Synonyms	Fatty Acid-Binding Protein Brain;Brain Lipid-Binding Protein;BLBP;Brain-Type Fatty Acid-Binding Protein;B-FABP;Fatty Acid-Binding Protein 7;Mammary-Derived Growth Inhibitor Related;FABP7;BLBP;FABPB;MRG
Species	Human
Expression Host	E.coli
Sequence	Met 1-Ala132
Accession	O15540
Calculated Molecular Weight	14.9 kDa
Observed molecular weight	16 kDa
Tag	None

Properties

Purity	> 95 % as determined by reducing SDS-PAGE.
Endotoxin	Please contact us for more information.
Storage	Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of reconstituted samples are stable at < -20°C for 3 months.
Shipping	This product is provided as lyophilized powder which is shipped with ice packs.
Formulation	Lyophilized from sterile PBS, pH 7.4 Normally 5 % - 8 % trehalose, mannitol and 0.01 % Tween80 are added as protectants before lyophilization. Please refer to the specific buffer information in the printed manual.
Reconstitution	Please refer to the printed manual for detailed information.

Data

> 95 % as determined by reducing SDS-PAGE.

Background

BLBP; also known as FABP7; is a brain fatty acid binding protein. Fatty acid binding proteins (FABPs) are a family of small; highly conserved; cytoplasmic proteins that bind long-chain fatty acids and other hydrophobic ligands. FABP7 binds DHA with the highest affinity among all of the FABPs. FABPs may play roles in fatty acid uptake; transport; and metabolism. BLBP is expressed; during development; in radial glia by the activation of notch receptors. It was shown that reelin induces FABP7 expression in neural progenitor cells via notch-1 activation. BLBP variation is linked to weak prepulse inhibition(PPI) in mice and deficit in PPI is an endophenotypic trait observed in schizophrenia patients and their
