## PE/Cyanine5 Anti-Human CD21 Antibody[HI21a]

## Catalog Number: E-AB-F1320G

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description		
Reactivity	Human	
Host	Mouse	
lsotype	Mouse IgG2a, к	
Clone No.	HI21a	
Isotype Control	PE/Cyanine5 Mouse IgG2a, κ Isotype Control[C1.18.4] [Product E-AB-F09802G]	
Conjugation	PE/Cyanine 5	
Conjugation Information	PE/Cyanine5 is designed to be excited by the Blue (488 nm), Green (532 nm) and yellow-green (561 nm) lasers and detected using an optical filter centered near 670 r (e.g., a 690/50 nm bandpass filter).	
Storage Buffer	Phosphate buffered solution, pH 7.2, containing 0.09% stabilizer and 1% protein protectant.	
Applications	Recommended usage	
FCM	Each lot of this antibody is quality control tested by flow cytometric analysis. The amount of the reagent is suggested to be used 5 $\mu$ L of antibody per test (million cells in 100 $\mu$ L staining volume or per 100 $\mu$ L of whole blood). Please check your vial before the experiment. Since applications vary, the appropriate dilutions must be determined for individual use.	

Human peripheral blood lymphocytes are stained with FITC Anti-Human CD19 Antibody and PE/Cyanine5 Anti-Human CD21 Antibody[HI21a] (Left). Lymphocytes are stained with FITC Anti-Human CD19 Antibody and PE/Cyanine5 Mouse IgG2a, κ Isotype Control (Right).

Storage	Keep as concentrated solution.
	This product can be stored at 2-8°C for 12 months. Please protected from prolonged
	exposure to light and do not freeze.
Shipping	Ice bag
Antigen Information	
Alternate Names	CD21;CR2;Complement C3d receptor;Complement receptor type 2;Cr2;EBV receptor
	Epstein-Barr virus receptor
For Research Use O	nly

CD21 is a 145 kD transmembrane protein also known as complement C3d receptor (C3dR), complement receptor 2 (CR2), and Epstein-Barr virus receptor. CD21 is expressed on B cells, follicular dendritic cells, subsets of normal thymocytes and T cells, and some epithelial cells. CD21 is the receptor used by Epstein-Barr virus to infect B cells and is also the complement receptor for C3d. CD21 has also been shown to interact with a number of proteins, including CD23, CD19, annexin VI, CD81, iC3b, complement receptor 1 (CR1, CD35), and interferon-alpha 1 (IFN-α1).
