## Background

IGHA1 (Immunoglobulin Heavy Constant Alpha 1) is a Protein Coding gene. Among its related pathways are Vesicle-mediated transport and Binding and Uptake of Ligands by Scavenger Receptors. GO annotations related to this gene include antigen binding and immunoglobulin receptor binding. An important paralog of this gene is IGH A2.

IGHA2 (Immunoglobulin Heavy Constant Alpha 2 (A2m Marker)) is a Protein Coding gene. GO annotations related to this gene include antigen binding and immunoglobulin receptor binding. An important paralog of this gene is IGH A1.
