

Anti-Clumping Agent

Cat. No.: PB180527

Size: 10mL

Product Description

Anti-Clumping Agent is a concentrated liquid reagent that reduces cell clumping to assist in attaining higher viable cell densities in suspension culture. Anti-Clumping Agent is a gentle, animal origin-free, chemically defined formulation that contains no proteins, enzymes, hydrolysates, or components of unknown composition.

Application

This product is suitable for research and large-scale biologics production, but it is not intended for direct human use or as a pharmaceutical drug.

General Information

Product Form	Liquid
Concentration	35 mg/mL
Working Concentration (Recommended)	1:200-1:2000
pH	6.0-7.5
Osmolality	30-80 mOsm/kg
Storage	2-8°C, Shading Light
Shipping	Room Temperature
Expiration date	12 months

Notes

1. This product is only used for scientific research or further research, not for diagnosis and treatment.
2. This product has been sterilized through filtration and is ready for direct use.
3. When using this product, aseptic techniques should be followed to prevent contamination.
4. The use of this product should be adjusted based on the extent of cell agglomeration.
