# Recombinant Mouse PIGR Protein (His Tag)

Catalog Number: PKSM040856

Note: Centrifuge before opening to ensure complete recovery of vial contents.

#### **Description**

**Species** Mouse

**Source** HEK293 Cells-derived Mouse PIGR protein Met 1-Lys 645, with an C-terminal His

 Calculated MW
 70.8 kDa

 Observed MW
 90-100 kDa

 Accession
 NP 035212.2

Bio-activity Immobilized recombinant mouse PIGR at 5 μg/ml (100 μl/well) can bind mouse IgM

with a linear range of 0.156-10 μg/ml.

### **Properties**

**Purity** > 97 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per µg of the protein as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

**Formulation** Lyophilized from sterile PBS, pH 7.4

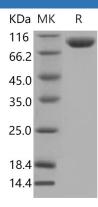

Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants

before lyophilization.

Please refer to the specific buffer information in the printed manual.

**Reconstitution** Please refer to the printed manual for detailed information.

#### Data

> 97 % as determined by reducing SDS-PAGE.

## Background

## **Elabscience Bionovation Inc.**

Elabscience®

Polymeric immunoglobulin receptor, also known as PIGR, is a member of the immunoglobulin superfamilyand aFc receptor. The ectodomain of this receptor consists of five units with homology to the variable units of immunoglobulins and a transmembrane region, which also has some homology to certain immunoglobulin variable regions. PIGR is expressed on several glandular epithelia including those of liver and breast. The deduced amino-acid sequence has a length of 764 residues and shows an overall similarity of 56% and 64% with the rabbit and rat counterpart. PIGR mediates transcellular transport of polymeric immunoglobulin molecules, and thus facilitates the secretion of gaand IgM. During this process, a cleavage occurs that separates the extracellular (known as the secretory component) from the transmembrane segment of PIGR.
