

Recombinant Human IL-23(IL23A&IL12B) Protein (His Tag)

Catalog Number: PKSH033619

Note: Centrifuge before opening to ensure complete recovery of vial contents.

T.		4.0
Desc	TIT	non
DUSU	ш,	CLUII

Species Human

Source HEK293 Cells-derived Human IL-23 protein Arg20-Pro189Ile23-Ser328, with an C-

terminal His

Calculated MW 55.2 kDa Observed MW 60-90 kDa

Accession P29460&Q9NPF7

Measured by its ability to induce STAT reporter activity in 293F human embryonic **Bio-activity**

kidney cells. The ED₅₀ for this effect is 300-900 ng/ml.

Properties

Purity > 95 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per ug of the protein as determined by the LAL method.

Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to -80 Storage

°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots of

reconstituted samples are stable at < -20°C for 3 months.

This product is provided as lyophilized powder which is shipped with ice packs. Shipping Lyophilized from a 0.2 µm filtered solution of 20mM PB, 150mM NaCl, pH 7.4. Formulation

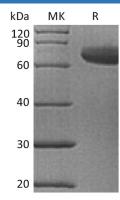

Normally 5% - 8% trehalose, mannitol and 0.01% Tween 80 are added as protectants

before lyophilization.

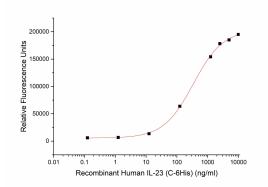

Please refer to the specific buffer information in the printed manual.

Reconstitution Please refer to the printed manual for detailed information.

Data

Measured by its ability to induce STAT reporter activity in 293F human embryonic kidney cells. The ED₅₀ for this effect is 300-900 ng/ml.

Background

Interleukin 23 (IL-23) is a heterodimeric cytokine composed of two disulfide-linked subunits, a p19 subunit that is unique to IL-23, and a p40 subunit that is shared with IL-12. The p19 subunit has homology to the p35 subunit of IL-12, as well as to other single chain cytokines such as IL-6 and IL-11. The p40 subunit is homologous to the extracellular domains of the hematopoietic cytokine receptors. Although p19 is expressed by activated macrophages, dendritic cells, T cells, and endothelial cells, only activated macrophages and dendritic cells express p40 concurrently to produce IL-23. IL-23 has biological activities that are similar to, but distinct from IL-12. Both IL-12 and IL-23 induce proliferation and IFN-gamma production by human T cells. While IL-12 acts on both naive and memory human T cells, the effects of IL-23 is restricted to memory T cells.
